In Three P A R T S, viz.

C O N T A I N I N G,

- I. TABLES of INTEREST for any Sum at the current Prices of 2 , $2\frac{1}{2}$, 3 , $3\frac{1}{2}$, 4 , $4\frac{1}{2}$, and 5 per Cent from 1 to 90 and 300 Days, and from 1 Month to a Year.
- II. TABLES of DISCOUNT, for any Sum at 5 per Cent. from 1 to 60 and 300 Days, and from 1 Month to a Year; also at all the different Rates from 1 to 20 per Cent. for a Year.
- III. Sundry TABLES, shewing the Value of ANNUITIES certain, and ANNUITIES on Lives, founded on the most rational Probabilities; with Rules and Examples to find the Value of two or more Lives, joint Lives, Reversions of Estates, Advowsons, Presentations, &c. in the most plain, easy and intelligible Manner.

To which is prefixed, by Way of Introduction,

A New and Comprehensive TREATISE ON DECIMALS; and an Explanation of the several Parts of the Book.
A TABLE of COMMISSION is annexed to the whole.

By S. THOMAS, Author of the BRITISH NEGOCIATOR or FOREIGN EXCHANGES made easy.

T H E
P R E F A C E.

THE following Sheets contain Tables of Interest and Discount at all the current Rates now paid throughout Great Britain, for the Loan of Money : And also sundry Tables, shewing the Valuation of Annuities certain, as well as on a Life, or Lives.

THE several Calculations have been made with great Care and Accuracy, and may be trusted to with Confidence ; especially, as they have all been re-examined by different Hands, the Author's ingenious Friends, who were kind enough to give him their Assistance, not only in revising the Tables in general, but in planning, digesting, and constructing some Parts of them, and other Articles.

AN Introduction is prefixed, exhibiting a full and clear Account of the Construction of the several Tables, with an Exemplification thereof, which, 'tis hoped, will be found both conclusive and satisfactory : To this the Reader is referred.— And,

The P R E F A C E.

THE Work in general is frankly submitted to the Consideration and Candour of the Public; the Author not doubting, but that its Excellencies, if it inherits any, will be readily discovered by the judicious and impartial; that due Regard will be paid to its Merit; and that it will meet with suitable Encouragement; of this he may presume to flatter himself, having experienced the kind Reception his former Performances met with.

THE Author chuses to avoid Comparisons, and, tho' he pays the greatest Regard to the Opinion of the unprejudiced judicious Public, and is conscious that some Faults may have escaped the Notice of him and his Friends, he is not afraid, nevertheless, of a Wayward Cast from a Brother, who may take Occasion to throw the first Stone.—In fine,

As the Book is rendered intelligible to all who understand common Arithmetic, if it be found to be of general Use in facilitating Commerce, it will answer his Motives in undertaking it, and give him great Pleasure and Satisfaction.

INTRODUCTION.

IN order to shew on what Principles these Tables of Interest, Discount, &c. are founded, the following short Treatise on Fractions, particularly Decimals, claims a Place here.

Fractions are of two Sorts, Vulgar and Decimal, in both which a Unit, or one Whole, as a Pound, a Hundred Weight, &c. is supposed to be divided into a certain Number of equal Parts, and the Fraction denotes one or more of those Parts of the Unit so divided. A Vulgar Fraction is expressed

Thus, $\frac{3}{4}$ Numerator.

Denominator.

The Denominator is to be supposed one Whole, as a Pound, &c. divided into four Parts, and the Numerator shews how many of those Parts are contained in the Fraction. This Sort of Fraction is determinate, as it shews the exact Value of the Sum or Thing specified, and in reading these Sort of Fractions the Numerator is first mentioned, as $\frac{3}{4}$ above, are three-fourths of any Thing, $\frac{7}{8}$ are seven-eighths, &c. If a whole

Number stands before a Vulgar Fraction, as $12\frac{5}{8}$, it is read twelve and five-eighths, and so for any other.

A Decimal Fraction is set down as a whole Number, with only a Comma before it, thus ,5 ; but must be supposed always to have an Unit or one placed under it, with as many Cyphers annexed as there are Figures or Places in the given Decimal ; thus $\frac{5}{10}$ is five tenths of a Whole, $\frac{25}{100}$ is twenty-five Parts of One Hundred, and $\frac{5}{100}$ is five Parts of One Hundred, &c. The Denominator of a Decimal always increasing in a ten-fold Degree is so well known that it is seldom or never set down : Therefore a Decimal with a whole Number is set down thus 24,75, and not $24\frac{75}{100}$, the Value thereof being 24 and seventy-five Hundred Parts of an Unit more.

Whole Numbers *increase* in a Tenfold Proportion to the Left-hand, and Decimals *decrease* in a Tenfold Proportion to the Right from the Comma or Mark, as follow :

Whole N^o. Decimals

1 ,1	= one Tenth of an Unit
10 ,01	= one Hundredth Part
100 ,001	= one Thousandth Part
1000 ,0001	= one ten Thousandth Part
10000 ,00001	= one hundred Thouf. Part.

Here it may be observed, that tho' a Cypher or Cyphers were prefixed to the Left-hand of whole Numbers, the Value thereof would neither be increased or decreased thereby, as 0010 is only Ten ; and in Decimals, if ever so many Cyphers be added to the Right-hand, the Value thereof is neither increased or decreased, as ,100 is but one tenth of an Unit still.

In all Decimal Numbers, if the Point of Distinction be removed one Figure to the Right-hand, the whole Decimal will be increased Ten-fold, as ,4462, is 4,462, &c.

ADDITION of DECIMALS.

The Numbers must be placed Units under Units, and Tens under Tens, as in whole Numbers ; and the Decimals must be placed under each other from the Comma or Mark in like Manner to the Right-hand, and then proceed as in common Addition ; and from the Sum take off as many Places for Decimals as are equal to the greatest Number of Decimal Places in any of the given Numbers.

N. B. In the last Example, where the under Number has more Decimals than the upper, Cyphers must be supposed to supply such Vacancy ; and so in all Cases.

M U L T I P L I C A T I O N.

In Multiplication the Work is the same as in whole Numbers ; and from the Product as many Decimals must be pointed off as there are in both

The INTRODUCTION.

v

the Multiplicand and Multiplier. When there are not so many Decimal Places in the Product as in both the Factors to be multiplied, Cyphers must be prefixed to make up the Number equal to both the others.

E X A M P L E S.

46,21	,41600
3,45	,01760
23105	2496000
18484	291200
13863	41600
159,4245	,0073216000

When a Decimal is to be multiplied by 10, 100, or 1000, it may be done by Inspection, or by removing the Mark or Point one, two, or three Places to the Right-hand, thus ,04675 multiplied by 10, is ,4675 ; by 100, 4,675 ; and by 1000, 46,75, &c.

The Method of contracting the Work, when the Decimal Numbers in the Factors exceed 3 or 4 in each, being more curious than useful, is omitted.

D I V I S I O N.

The Work in the Division of Decimals is performed the same Way as in whole Numbers ; and to discover the Value of the Quotient, or to mark off the Decimals, the first Figure arising in the Quotient must always be of the same Denomination with that Figure in the Dividend which stands, or is supposed to stand, above the Unit's Place in the Divisor multiplied into the said first Quotient Figure.

N. B. In these two last Examples, where

there are no whole Numbers, the Units Place must be supposed. In the former, it stands under the 2 in the Dividend, the first Place of Decimals; for in multiplying the 2 in the Divisor by 9, the first Figure in the Quotient, a whole Number is produced. In the latter, the 1 in the Divisor, when multiplied into the 2 in the Quotient, stands under the Ten Thousandth Place of Decimals, yet as that 3 came from the 2d Place of Decimals, in the Divisor the Units Place must be supposed to fall two Figures more to the Left-hand, which would be under the second Cypher, or second Decimal Place; therefore the 2 in the Quotient must be the second Place of Decimals, as marked.—*This being understood, all other Cases will be easy.*

R E D U C T I O N.

Reduction may be considered under three Cases or Heads, viz.

C A S E I.

To reduce a Vulgar Fraction into a Decimal one.

Divide the Numerator with one or more Cyphers annexed by the Denominator, and mark off the Decimals in the Quotient as in Division, ob-

viii. *The* INTRODUCTION.

serving always that the Cyphers added to the Numerator must be reckoned Decimals.

What Decimals are equivalent to $\frac{3}{4}$, $\frac{5}{8}$, $\frac{7}{8}$ of Vulgar Fractions?

$\begin{array}{r} 4 \overline{) 3,0(,75} \\ \underline{28} \\ 20 \\ \underline{20} \\ 0 \end{array}$	$\begin{array}{r} 6 \overline{) 5,0(,833, \&c,} \\ \underline{48} \\ 20 \\ \underline{18} \\ 2 \end{array}$	$\begin{array}{r} 8 \overline{) 7,0(,875} \\ \underline{64} \\ 60 \\ \underline{56} \\ 40 \end{array}$
---	--	---

Answer ,75, ,833, and ,875.

When the Quotient is continued to four or five decimal Places, and there be still a Remainder, such Remainder being of little Value may be omitted without much Injustice.

Reduce $\frac{157}{190}$ of a Pound to a Decimal.

190) 157,000 (,826, &c, Answer.

$$\begin{array}{r} 1520 \\ \underline{} \\ 500 \\ 380 \\ \underline{} \\ 1200 \\ 1140 \\ \underline{} \\ 60 \end{array}$$

And so for any other.

C A S E II.

To reduce any known Part, or Parts of Money to a Decimal.

Reduce the Part or Parts given to the lowest Denomination for the Numerator, and place under them the Parts in the Integer to which the Fraction is to be reduced, or to that demanded in the Question, for the Denominator, and then proceed as before.

Reduce 14 s. 6 d. to the Decimal of a Pound.

$$14 \text{ s. } 6 \text{ d.} = 174 \text{ d.}$$

$$1 \text{ l.} = 240 \text{ d.}$$

Therefore, $240 \overline{) 174,00} (,72$ Answer:

1680

600

480

20

Reduce 3 qrs. and 14 lb. to the Decimal of One Hundred Weight.

$$3 \text{ qrs. } 14 \text{ lb.} = 98 \text{ lb.}$$

$$1 \text{ Cwt.} = 112 \text{ lb.}$$

Then,

C A S E III.

To find the Value of a Decimal, or to reduce one to the known Parts of Money, Weight, Measure, Time, &c.

The Decimal given must be multiplied by the common or known Parts of the Integer, beginning always with these of the highest Denomination, and cut off as many Decimals after each Multiplication as were in the given one, for whole Numbers, in each Species.

E X A M P L E S.

Reduce ,7642 of a Pound Sterling to the known Parts thereof.

$$\begin{array}{r}
 ,7642 \\
 20 \\
 \hline
 15,2840 \\
 12 \\
 \hline
 3,4080 \\
 4 \\
 \hline
 1,6320
 \end{array}$$

Answer 15 s. $3\frac{1}{4}$ d.

What's the Value of ,6425 of 1 Cwt?

$$\begin{array}{r}
 4 \\
 \hline
 2,5700 \\
 28 \\
 \hline
 15,9600
 \end{array}$$

Answer 2 qrs. 15 lb.

What's the Value of ,8576 of a Pound Sterling?

$$\begin{array}{r}
 ,8576 \\
 20 \\
 \hline
 17,1520 \\
 12 \\
 \hline
 1,8240 \\
 4 \\
 \hline
 3,2960
 \end{array}$$

Answer 17 s. 1 $\frac{3}{4}$ d.

N. B. The Value of the Decimal of a Pound Sterling may readily be found by Inspection thus, viz. double the first Figure, (or Place of Tens) and it will make so many Shillings; and if the second Figure be 5 or more, for the 5 add One Shilling more to the Shillings before, then for every Unit left in the second Place reckon 10, and to that add the third Figure, which count so many Farthings, but when they exceed 13 abate 1, when 38 abate 2, and place the rest in Pence and Farthings to the former Shillings.

E X A M P L E S.

		s.	d.			s.	d.
,87	=	17	4 $\frac{3}{4}$	,4769	=	9	6 $\frac{1}{2}$
,360	=	7	2 $\frac{1}{2}$	,0929	=	1	10 $\frac{1}{4}$
,519	=	10	4 $\frac{1}{2}$	,00959	=	0	2 $\frac{1}{4}$

☞ Here it must be observed, if the Decimals consist but of two Places, a Cypher must be supposed in the third; and when of four, if the fourth Figure be a 6, or more, another Farthing must be added for it.

Thus much being premised, I proceed to shew on what Principles the following Tables are founded.

P A R T I.

This Part treats of Interest at different Rates: Interest is a Premium paid for the Loan of Money for a Year, a Mouth, a Number of Day, &c. which, when the Time agreed upon is expired, becomes due to the Person who lent the Money. It is rated on 100*l.* for a Year; the Law allows 5*l.* as a Premium for such Loan of 100*l.* and those Persons who take more than 5 per Cent. Interest are term'd Extortioners, and may be prosecuted as such, according to an Act of the 12th of Queen Ann. But lower Rates are often agreed on between Lenders and Borrowers of Money, as 4, $3\frac{1}{2}$, 3, &c. for the Loan of 100*l.* for a Year; and the Interest of all Sums, greater or less than 100*l.* is calculated in Proportion to the Rate agreed on, by the 100*l.* for a Year, which is called Simple Interest.

Compound Interest is rated in the like Manner, but cannot take Place till the second Year, when the Simple Interest due on the Principal for

xiv *The* I N T R O D U C T I O N.

the first Year is reckoned as Part of the the said Principal, the Interest of both being to be added to, and reckoned with, the 2d Year's Principal, for the third Year's Principle, &c. But this Sort of Interest being illegal, and as it is in some Measure foreign to my Purpose in this Place, a further Account of it is omitted.

Simple Interest is calculated by the Rule of Proportion thus :

E X A M P L E S.

What is the Interest of 170 *l.* at 4 per Cent. for a Year ?

If 100 *l.* : 4 *l.* :: 170 *l.*

4

100)680(6,8

Answer 6 *l.* 16 *s.*

Then if it be required to know the Interest of the said Sum for 1, 10, 100, or 1000 Days, proceed thus :

If 1 Y. or 365 Days : 6,8 *l.* :: 1 Day

I

365)6,800000(,018630

	<i>l.</i>	<i>s.</i>	<i>d.</i>	
Answers ,0186301 =	0	0	4½	for 1 Days
,186301 =	0	3	8¾	10 Days
1,86301 =	1	17	3¼	100 Days
18,6301 =	18	12	7¼	1000 Days

More Examples seem needless, yet I add the following Table at all the various Rates, calculated as the foregoing, for 1 *l.* for 1 Day, by Way of Check to the Tables at Length, which are all founded on the same Principles.

TABLE of Interest of 1 *l.* for a Day.

E X A M P L E.

What's the Interest of 1240 *l.* at 4½ per Cent.
for 145 Days ?

£. 1000 is ,123287
200 ,024657
40 ,004931

Interest for 1 Day ,152875

Then 100 Days is 15,2875

1 Day ,152875

9 x 5 = 45 Days

9

1,375875

5

6,879375

6.879375

£. 22,166875

Answer 22 *l.* 3 *s.* 4 *d.*

In all Cases, unless the Sum exceed 1000l. six Places of Decimals will be sufficient to be made use of, the rest being of little Value.

If any other Rate of Interest should be wanted, which is not in the following Tables, that may be obtain'd by taking an equal Part of any of the given Rates therein, and adding it to another to make up what is wanted; or, any of the Sums for Interest doubted will be a double Rate of Interest as they stand respectively. As for Example :

What's the Interest of 360l. for 35 Days, at $4\frac{3}{4}$ per Cent. ?

By the TABLES,			£. s. d.		
$2\frac{1}{2}$ per Cent. 300 l.	}	35 Days is	0	14	$4\frac{1}{2}$
per D ^o 60 l.			0	2	$10\frac{1}{2}$
$2\frac{1}{4}$ per Cent. 300 l.	}	$=\frac{1}{2}$ of $4\frac{1}{2}$	0	12	$11\frac{1}{4}$
per D ^o 60 l.			0	2	7
The Ans.			1	12	$9\frac{1}{4}$

In like Manner any other Rates may be made up, whether higher or lower; as 5 per Cent. and $3\frac{1}{2}$ per Cent. will be $8\frac{1}{2}$ per Cent. if added; and, if subtracted, the Remainder will be $1\frac{1}{2}$ per Cent. and so for any other, which will always answer in equal Proportion.

The Commission Table, at the End of the Book is calculated the same Way as Interest for a Year, at the several Rates therein mentioned;

xviii. *The* I N T R O D U C T I O N.

and will answer, by adding or subtracting, to any other Prices of Commission, &c. that may be wanted.

If it should be required how to calculate what Interest is made of Money laid out in the Stocks or public Funds, the following Proportion must be observed.

As the Price paid for 100 l. (for all the Stocks are sold at a fluctuating Price per Cent. between 70 and 120 generally) is to 100; so is the Rate the Stock bears to the Interest made per Cent. by the Purchase. Or,

Which is far more easy, as the Price paid, is to 100 l. 90, 80, 70, or 60, which Answer to the Rate of the Stock respectively, at 5, $4\frac{1}{2}$, 4, $3\frac{1}{2}$, or 3 per Cent. so is 5 the legal Interest of 100 l. to the Answer, or Rate required.

E X A M P L E.

What Interest is made of Money laid out in $3\frac{1}{2}$ per Cent. Annuities, when they are bought at $85\frac{3}{4}$ per Cent.?

1st Way—If $85\frac{3}{4} : 100 :: 3\frac{1}{2}$

3.5

85,75) 35 000 (4,0816, or

The Answer 4 l. 1 s. 7 d. $\frac{1}{2}$ per Cent.

2d Way.—If $85\frac{3}{4}$ l. : $3\frac{1}{2}$ l. or 70 :: 5 l.

Or if 343 : 280 :: 5

5

343) 1400 (4,0816

4 l. 1 s. 7 d. $\frac{1}{2}$ The Answer as before.

The latter Way seems preferable, especially as there can but one Fraction occur, and as it is got clear of so readily, thus, multiply the first and second Terms into its Denominator (the Numerator being to be taken in with the first) and the Products will be the lowest whole Numbers of equal Value, which equate the Terms, and no Way alter the Proportion.

By the Proportion of the former of these Methods, if the Sum, or Money intended to be laid out in any of the Stocks, be placed in the third Place, it will give the exact Quantity of Stock such Sum will purchase. But,

To find the present Worth of any Quantity of Stock, Prizes or Blanks, in the Lottery, the Proportion must be reversed as under, viz.

What is 500l. Stock (or Lottery Prize) worth, at $85\frac{3}{4}$?

If 100l : $85\frac{3}{4}$:: 500l.

Or 4|00 : 343 :: 5|00

5

4) 1715 (428.75, or 428l. 15s. the Ansf.

And so for any other Quantity of Stock, Prizes or Blanks, no Regard being paid to the Interest the Stock bears, but only the Price sold at, in calculating the Value.

P A R T II.

This Part treats of Discount, which must be understood to be a Premium paid in Hand for the Loan of Money, for a certain limited Time yet to come; and tho' it is mostly term'd and reckon'd as the same Thing with Interest, it is in Fact very different. Indeed, when an Abatement of so much in the Pound is made for ready Money, or prompt Payment, for Goods sold, it is equal to the Interest of the said Purchase Money for a Year, at the Price agreed on between the Parties, but, in such Cases, it is improperly called Discount. The following Example may suffice to explain it, as well as to shew wherein it differs from Interest, viz.

A Gentleman on his Death-Bed gave his Friend A, a Bond for 1000 l. payable by his Executor one Year after his Demise; A, soon after hearing of his Friend's Death, and being in narrow Circumstances, goes to his Neighbour B to discount the said Bond. B ask'd him 50 l. Very well, says A, and, if I allow you 50 l. in Hand, which is the full Interest of 1000 l. at 5 per Cent. at the End of the Year, who must have the Interest of the said 50 l. for the present Year, you or I? If you will return me the Interest thereof, viz. 2 l. 10 s. I shall be ready to agree to your Terms; if not, I must apply to another. A adds further,

if you'll give me as much Money for my Bond, supposing it were lent out on Interest, at 5 per Cent. for a Year, as with the Interest thereof, will, at the Year's End, make up my Legacy 1000l. I shall deal with you, and not otherwise. B, the Banker, agrees, and A calculates it thus :

If $105 : 5 :: 1000$

5

$105 \) \ 5000 (\ 47.6189$

or 47 l. 12 s. 4 d. $\frac{1}{2}$, the Discount due to B, which deducted from 1000l. leaves 952 l. 7 s. 7 d. $\frac{1}{2}$, the Sum A received.

Thus it appears that B got only 47 l. 12 s. 4 d. $\frac{1}{2}$ instead of 50 l. which he demanded for discounting the Bond ; and that he got all he ought to have had, may be proved thus, viz. If B lends out the 47 l. 12 s. 4 d. $\frac{1}{2}$, it would bring him 2 l. 7 s. 7 d. $\frac{1}{2}$ Interest, and increase itself to 50 l. at the Year's End, which Sum would be all he had a Right to by Law ; and supposing the Money A received to be put out at 5 per Cent. it would just bring him the Sum, viz. 47 l. 12 s. 4 d. $\frac{1}{2}$, he paid in Hand to B, and he would have his 1000 l. entire again at the Year's End ; so that both Parties would have equal Justice.

The Discount at any other Rate is found in the like Manner, and the Proportion still runs thus ; as 100 l. and the Rate proposed is to the Rate itself, so is the Sum proposed to its Discount, according to the Rate per Cent.

xxii. *The* INTRODUCTION.

The Discount for any Number of Days, is also found in the like Manner, by adding the Interest of the Days, at the Rate per Cent. to 100l. for the first Term, and making the Interest itself the second, and the Sum the third; or, which answers the same Thing, divide 1l. by 1l. and the Interest thereof for the given Time, and subtract the Quotient from Unity, and you will have the true Discount of 1l. for the Time required, which multiplied into the given Sum will be the Answer.

EXAMPLE.

What's the Discount of 1l. for a Year, at 1 per Cent.?

If 100l. : 1l. :: 1l.

100) 1,00 (,01 the Interest.

Then if 1,01 : 1 :: 1

1,01) 1.000 (,990099009, which subtracted from Unity, leaves 00990099 the Answer; and, in like Manner, the following are calculated at the several Rates for 1l. for a Year.

Per Cent. Discount.

$$1 = ,00990099$$

$$1\frac{1}{2} = ,01477832$$

$$2 = ,01960784$$

$$2\frac{1}{2} = ,02439024$$

$$3 = ,02912621$$

$$3\frac{1}{2} = ,03381642$$

$$4 = ,03846153$$

Per Cent. Discount.

$$4\frac{1}{2} = ,04306220$$

$$5 = ,04761904$$

$$6 = ,05660377$$

$$7 = ,06542056$$

$$8 = ,07407407$$

$$9 = ,08256880$$

$$10 = ,09090909$$

When the Discount, for a Number of Days, &c. is required of any Sum, the Interest thereof must be carefully calculated for 1 l. for the said Time, and added to Unity; then proceed as before.

On these Principles the Tables at Length are founded; and, tho' the Discount of 2 l. or 5 l. is double or five Times that of 1 l. at the same Rate, and for the same Time respectively. Yet it must be observed, that the Discount of 2 and 5 per Cent. will not be equal to seven per Cent. but considerably more, as may be found on Trial, or by inspecting the Rates aforesaid. In like Manner, that for 10 and 15 Days, at any Rate whatever, will exceed that of 25 Days, at the same Rate. Thus it appears, that it bears no due Proportion as Interest does; the Reason of which will appear obvious, upon a little Reflection, without farther Explication.

PART III.

Herein Annuities certain, and Annuities for Life, founded on the most rational Probabilities, are treated of. Annuities certain are calculated partly by the Rules of Compound Interest, and partly by those of Discount, before given. In Compound Interest, each Year's Interest is added to the Principal, for the following Year's Principal, &c.

xxiv. *The* I N T R O D U C T I O N.

Table the first, Page 286, shews the present Value of an Annuity of 1 l. for any Number of Years to come, and is thus formed, viz.

By dividing Unity by 1 l. and the Interest thereof, as in Discount, for the first Year; then to find the Value for the second Year, &c. the Amount of 1 l. Annuity for two Years, must be divided by the Amount of 1 l. or 1 l. and its Interest, for two Years; and so for the third Year, &c. respectively.

E X A M P L E, at 5 per Cent.

	£.	Yrs
1,05)1,000000(=0,952380 or 0 19 0 $\frac{1}{2}$		1
1,1025)2,050000(=1,859410 or 1 17 0 $\frac{1}{4}$		2
1,157625)3,15250 (=2,723248 — 2 14 5 $\frac{1}{2}$		3
Agreeable to the Table.		

Here it may be necessary to observe that the Amount of One Pound for Years, is only 1 l. and its Interest, reckoning Compound Interest; and is found by multiplying 1 l. by 1 l. and its Interest for each Year, as exemplified in the above Divisors: And the Amount of 1 l. Annuity for Years, is found (after the first Year) by multiplying by 1 l. and its Interest, and adding 1 to each Product respectively before you proceed to multiply for the next Year: This is exemplified in the above Dividends; and note also,

That the present Worth of 1 l. due a Number of Years hence; or the present Worth of 1 l. An-

nuity, for a Number of Years hence, will be considerably less than the Amount of 1 l. or of 1 l. Annuity in the like Number of Years.

The next Table, Page 290, is a Sort of Counter Part to the former, and shews the Annuity 1 l. will purchase for any Number of Years to come, and is thus constructed.

Divide Unity by the Numbers in the former Table respectively, and it will give the Annuity sought. **E X A M P L E** at 5 per Cent.

$$\begin{array}{lcl} .952380 &) & 1,000000 (.105 = 1 \\ 1,859410 &) & 1,000000 (.5378049 = 2 \\ 2,723248 &) & 1,000000 (.3670286 = 3 \end{array} \left. \vphantom{\begin{array}{l} .952380 \\ 1,859410 \\ 2,723248 \end{array}} \right\} \text{Years}$$

Agreeable to the Table.

Table, Page 293, shews in what Time an Annuitant will be reimbursed his Purchase-Money. It is constructed by dividing the Annuity by the Purchase-Money, and the Product gives the Value of the Annuity 1 l. will purchase, which look for in the Table next before it, under the given Rate, and opposite thereto, in the first Column, will be found the Time required.

The last Table, Page 325, shews the present Worth of 1 l. due a Number of Years hence, and is constructed, by dividing Unity by the Amount of 1 l. in each Year respectively.

E X A M P L E at 3 per Cent.

$$\begin{array}{lcl} 1,03 &) & 1,000000 (.9708738 = 1 \\ 1,0609 &) & 1,000000 (.9425959 = 2 \\ 1,092727 &) & 1,000000 (.9151417 = 3 \end{array} \left. \vphantom{\begin{array}{l} 1,03 \\ 1,0609 \\ 1,092727 \end{array}} \right\} \text{Years.}$$

xxvi. *The* INTRODUCTION.

So much for Annuities certain ; and, with Respect to Annuities on Lives, the Table, Page 296, shews the Value put upon a single Life, at all the current Prices of Interest ; and, as a full Explanation thereof is annex'd to it, no further Account of it seems necessary here. Sundry other Observations and various Methods of calculating these Sort of Annuities, are also inserted and exemplified under this Head.

It may be necessary to observe, that, according to all those Calculations, no Regard can be paid to the Health or Constitution of an Annuitant, as by his Age alone the Value of Life is herein determined ; so that, in some Cases, tho' the Table may put the full Value on a Life, yet, in many others, it may be supposed to be two or more Years under it. This is verified by Experience, as those Persons who sell Annuities, generally have 1, $1\frac{1}{2}$, 2, or more Years Value than specified in the Table, according to the State of Health, Constitution, &c. of the Purchaser.

In fine, tho' no real Certainty can be given of the Continuance of Life, yet those Calculations afford, at least, a rational one of it : This the most cautious and prejudiced must acknowledge ; and, tho' they cannot be look'd on as predictive or absolute, that they afford us the most probable Way of Guessing at the Longevity of Persons of different Ages.

Explanation of the following TABLE.

ENTER the Top of the TABLE with the Month you would reckon the Time from, and with your Eye go down the same Column under it till you come to the Month you want. As for EXAMPLE : How many Days from March 15, to October 15 ? Under March, in the Top Column, or Head Line, and opposite to October in the same Column, you find 214 Days for the Answer.

If from the Day of the Month given the Number of Days be required to a different Day in any other Month. In such Cases, add or subtract so many Days as the Date required exceeds or falls short of the Date you begin with, from the Number given by the Table, and you will have the true Answer respectively.—And in Leap Year, observe to add a Day to the Numbers in the Table, in all Cases when the whole of February is included in the Time wanted.

1. The first of these is the *Explanatory* part, which is the most important, and the most difficult to write. It is the part which gives the reader the key to the whole work, and which shows him the way to the truth. It is the part which is the most valuable, and the most interesting, and the most useful. It is the part which is the most difficult to write, and the most difficult to read. It is the part which is the most valuable, and the most interesting, and the most useful. It is the part which is the most difficult to write, and the most difficult to read.

PART II.

TWO TABLES OF DISCOUNT,

For any SUM;

- I. At Five *per Cent.* for any Number of Days, or Months.
- II. At One; One and a Half; Two; Two and a Half; Three; Three and a Half; Four; Four and a Half; Five, Six, Seven, Eight, Nine, Ten, and Twenty *per Cent.* for a Year.

See the Explanation, and how Interest and Discount differ, in the INTRODUCTION.

TABLE I.

Discount at 5 per Cent.

The Two foregoing TABLES exemplified.

Table the First, shews the present Value of an Annuity of 1 l. per Annum by Inspection, for any Number of Years hence : And as Table Second is a Sort of Counterpart to it, they consequently prove each other.

E X A M P L E:

What is an Annuity, of 100 l. for 12 Years, worth in Ready Money at 4 per Cent ?

By Table I. against 12 is	}	9,3850
9 l. 7 s. 8 d. 418 pts. or		
Multiply by		100

The Answer £. 938,5000

That is a Purchaser ought to pay no more in ready Money than 938 l. 10 s. for an Annuity of 100 l. during twelve Years.

Then by Table II. If 1 l. buy an Annuity of £. ,10655 for twelve Years, what will £. 938,50 buy ?

If 1	:	,10655	::	938,50
				,10655

The Answer £. 999,997175

Which making but a very trifling Allowance for the Decimal, may be reckoned 100 l. and proves the former Question.

N. B. The latter of these Tables is chiefly adapted to the Use of Purchasers, as well of certain Annuities as of Annuities for Life.

*Continuance of Life to reimburse the Annuitant

LIFE ANNUITIES.

These Kind of Annuities are calculated from, or founded upon Observations made on the Bills of Mortality in one or other of the principal Places in Europe; and out of a certain Number of Persons observed to be born annually at the said Place, if the Deaths at the several Ages from 1 to 80 or 90, be carefully taken each Year, and deducted regularly, the several Remainders will shew how many Persons are then living of each Age to the utmost Limits of Life. From which Numbers applied arithmetically, other ones, of correspondent Value, are deduced, shewing the most rational Probability of the Longivity of a Person of any given Age.

The following Table shews the Value of an Annuity of One Pound for a single Life at all the current Rates of Interest, and is look'd upon as the best extant, tho' in Fact those who sell Annuities generally have 1 and a Half, or two Years more Value, than specified in the said Table, from most Purchasers whose Ages exceed 20 Years, respectively.

RULES and EXAMPLES.

In order to explain the Principles on which the preceding Table, calculated by the celebrated Mons. de *Moivre*, is founded, 'tis necessary to premise, viz.

1st, That the *Complement* of Life is the Difference between the Age given and the Numb. 86, which is supposed to be the Extinction, or Limits of Life.

2d, The *Rate of Interest*, is the Amount of One Pound put out at Interest for a Year, or One Pound and the Interest thereof for a Year added together.

3d, The *Interest* of One Pound is only the simple Interest thereof for a Year.

CASE I.

To find the Value of an Annuity of 1 l. for the Life of a single Person of any given Age.

RULE. Take the Value of an Annuity certain for so many Years as are denoted by the Complement of Life, multiply that Value by the Rate of Interest, and divide the Product by the Complement of Life; then let the Quotient be subtracted from Unity, and let the Remainder be divided by the Interest of 1 l. and the Quotient will be the Value of the Annuity sought.

EXAMPLE. What is the Value of an Annuity of 1 l. for an Age of 40, Interest at 5 per Cent?

From — 86

Take the Age 40 —

Remainder 46 = Compl. of Life.

Then for an Age of 46, *per* Table I. shewing the Value of an Annuity of 1 *l.* for Years certain is 17 *l.* 17 *s.* 7,216 *d.* Or,

In Decimals — — £. 17,880

Rate of Interest — — 1,05

Div. by Compl. of Life 46) 18,77400(,40813

Then the Quotient ,40813 taken from Unity,

Thus, Unity — 1,00000

,40813

Remainder — — ,59137 Which

divided by ,05, the Interest of 1 *l.* the Quotient will be £. 11,837 4 for a Life of 40 Years, agreeable to the Table.

CASE II.

To find the Value of an Annuity for the joint Continuance of two Lives, one Life falling the Annuity to cease.

RULE. Multiply the Values of the two Lives together, and reserve the Product; then let that Product be multiplied by the Interest of 1 *l.* and subtract the new Product from the Sum of the Values of the said two Lives, and then divide the first Product of the two Lives by this Remainder

and the Quotient gives the Value of the joint Lives required.—For Instance,

Suppose the one Person of 40, and the other of 50 Years of Age, and Interest at 5 *per Cent.* what's the Value of an Annuity of 1 *l.* for their joint Lives?

By the Table, or *per* last Example, 40 Years is ————— } 11,83
And 50 is ————— } 10,35

First Product ————— 122,4405
Multiply by ————— ,05

Second Product ————— 6,122025

Sum of the two Lives is ————— 22,180000

Second Product deduct ————— 6,122025

Remainder ————— 16,057975

Then divide the first Product by this Remainder: Thus, 16,057975) 122,4405 (7,62 the Answer, or Value of the two joint Lives for One Pound Annuity required.

CASE III.

To find the Value of two joint Lives of equal Age.

RULE. Take the Value of One only from the Table, and proceed as before to multiply by ,05

then subtract that Product from Number 2, and then let the Value of one of the said Lives be divided by that Remainder, and the Quotient will be the Value of two joint Lives of equal Age at 5 per Cent ?

E X A M P L E.

Suppose two Persons of 40 Years of Age each, what's the Value of an Annuity of 1 *l.* for their joint Lives at 5 per Cent ?

By the Table one Life } 11,83
 of 40 Years, is }
 Multiply by ,05

 ,5915 Product.

Which Product deducted from 2, leaves 1,4085 ; then 11,83 divided by it, thus

1,4085) 11,83 (8,04 the Answer
 very nearly, which is the Value of the Annuity so long as they both live, one dying the said Annuity to cease.

C A S E IV.

To find the Value of the joint Continuance of three Lives.

RULE. Multiply the Values of the three Lives together, and call it the first Product ; then multiply that by the Interest of 1 *l.* and double that Product ; and then subtract it from the Sum of the several Products of the Lives taken two and

two, and reserve the Remainder for a Divisor; by which, if the Product of the three Lives be divided, the Quotient is the Value of the three joint Lives.

Suppose A's Life be worth 10 Years Purchase, B's 14, and C's 16, what's the Value of their joint Lives, Interest at 4 per Cent?

A 10, multiplied by B 14, is 140, and that by C 16, is (for the 1st Product) 2240

Interest — — — — — ,04

89,40

2

Double Product 178,80

Then the Product of A 10 }
by B 14, is — } 140

Ditto, B 14 by C 16 224

Ditto, C 16 by A 10 160

Sum of all, two and two — 524

Double Product by the Interest 178,80

Remainder — — — 345,20 which,

according to the Rule, divide the first Product of the three Lives by, viz.

345,2)2240(6,49 l. the Answer
very near, which is the Value of their three joint
Lives.

CASE V.

To find the Value of an Annuity upon the longer of two Lives, i. e. to continue so long as either of the Persons is in being.

RULE. From the Sum of the Values of the single Lives, subtract the Value of the joint Lives, and the Remainder will be the Value of that of the longer Liver.

E X A M P L E.

Suppose A be 30, and B 40 Years of Age, what is the Value of the Survivor's, or A's Life, he being the younger Person may reasonably be expected to be the longer Liver, Interest at 4 per Cent?

By the Table, 30 Years is	—	14,684
40 ditto	—	13,196

Sum	—	27,880
-----	---	--------

The Value of their joint Lives	}	9,626
found by Case 2d, deduct		

Remainder, the Value of A's Life 18,254
i. e. of 1 l. Annuity to continue to the Death of the longer Liver of those two Persons.

☞ If the two Lives be of equal Age, proceed as in Case 3d, for the Value of their joint Lives, which deducted from double the Value of one of the Lives, leaves the Value of the longer Life.

CASE VI.

To find the Value of an Annuity upon the longest of three Lives.

RULE. From the Sum of the Value of the three Lives, subtract the Sum of all the joint Lives combined two and two, and to that Remainder add the Value of the three joint Lives, and that Sum will be the Value of the longest Life.

EXAMPLE.

Suppose A, B, and C's Lives to be worth 10, 14, and 16 Years Purchase respectively, what is the Value of the longest of those Lives, Interest at 4 per Cent?

The Value of A's is 10

B's — 14

C's — 16

Sum of the Values 40

Then proceed by Case 2d to find the Value of the joint Lives combined two and two, thus,

A and B's is 7,61

B and C's — 10,64

C and A's — 8,16

26,41 Value of

all their joint Lives combined two and two, which taken from the Value of all their single Lives as follows, viz.

Value of all the single Lives	—	40
Value of all the combined Lives		26,41
		—
Remainder	—	13,59

Next, the Value of their three joint Lives is to be found by Case 4th, which will be 6,49; to which if the above Remainder be added the Sum will be 20,08, which is the Value of the longest of the three Lives required.

CASE VII.

To find the Value of Reversions, Advowsons, Presentations, &c.

RULE. From the Value of the perpetual Advowson, or an hereditable Estate, subtract the Value of the Life of the Person in Possession (the Value of the Perpetuity may be reckoned 20, 25, or 30 Years Purchase) and the Remainder will be the Value of the Reversion, &c.

EXAMPLE.

A, who is 45 Years old, has an Estate for Life of 50 l. per Ann. which after his Death is to descend to B, and his Heirs for ever; and B having Occasion to sell the Reversion, desires to know the Value thereof, Interest at 4 per Cent.?

By the Table, Value of A's Life	}	12,322
of 1 l. Annuity is —		
Multiply by the yearly Value		50

Total Value for A's Life — 616,100

Which Sum deducted from 25 Years Purchase, the Value of the Estate, viz. 1250 l. leaves 633 l. 18 s. the Value of B's Right to the said Estate.

☞ If the Reversion depend on two joint Lives, on the longer of two Lives, proceed as before-directed in Cases 2 and 5, and subtract the Results respectively from the Perpetuity.

C A S E VIII.

To find the Value of a perpetual Advowson or Living after the next Presentation, or after the Death of the Incumbent, and his Successor.

RULE. Proceed as in Case 5th, to find the Value of the longer of the two Lives, viz. the Incumbent's and that of the Person intitled to the next Presentation, and subtract the Value thereof from 20, (the Perpetuity) and the Remainder will be the Value of the Advowson.

E X A M P L E.

Suppose B, aged 50, enjoys a Living belonging to A, of 100 l. per Ann. And C, aged 30, is intitled to the next Presentation. Now A purposes to sell the Advowson with both B and C's

Lives on it ; Quere how much is it worth at the Rate of 4 per Cent ?

By the Table, B's Life of 50 is 11,344
C's ditto of 30 — 14,684

Sum	—	£. 26,028
Value of their joint Lives, found	}	8,602
by Case 2d, deduct		

Value of C's Life — — 17,426

Which Sum deducted from 20, the Perpetuity, leaves £. 2,574, the Sum to be paid for 1 l. Annuity ; that multiplied by 100 will be 257 l. 8 s. the full Money A ought to have for the perpetual Advowson.

C A S E IX.

To find the Value of the next Presentation to a Living.

RULE. From the Value of the Successor's Life, subtract the joint Values of his and the Incumbent's, and the Remainder multiplied by the annual Income of the Living will be the Sum to be paid for the next Presentation.

E X A M P L E.

If A enjoys a Living under C of 100 l. per Annum, and B wants to buy the said Living for his Life after A's Death, and be willing to allow

C at the Rate of 5 per Cent. How much should he pay for it, A being 60 and B 25 Years of Age?

By the Table, B's Life is	—	13,466
Joint Value of both Lives, found	}	6,970
by Case 2d, deduct		
Remainder	—	6,496
Multiplied by the yearly Value	—	100
		649,600

Answer 649*l.* 12*s.*

☞ The Value of a direct Presentation is found as that of any other Annuity for Life, and is shewn on 1*l.* Annuity by the Table.

N. B. Several other Cases might be added, but these being the most useful are thought sufficient.

Observations on the Probabilities of human Life, and the Method of calculating the Value of Life Annuities, according to different Authors, with sundry Improvements, follow.

TABLE I. by Dr *Halley*, on the Bills of Mortality at *Breslaw*.

Age.	Persons living.	Age.	Persons living.	Age.	Persons living.	Age.	Persons living.
1	1000	24	573	47	377	70	*142
2	855	25	*567	48	367	71	131

18	610	41	436	64	202	87	8
19	604	42	*427	65	192	88	*5
20	598	43	417	66	182	89	3
21	592	44	407	67	172	90	*1
22	*586	45	397	68	162	91	*0
23	*579	46	387	69	152		

The Intervals take Place at the Asterisks.

The preceding Table may be applied to very many Uses; but I shall only insert what may suffice for the present Purpose.

1. The first Use is to shew the different Degrees of *Mortality*, or rather *Vitality* in all Ages; for if the Number of Persons of any Age remaining after one Year, be *divided* by the *Difference* between that and the *Number* of the Age proposed, it shews the *Odds* that there is, that a Person of that Age does not *die* in one Year.

As for Instance, a Person of 25 Years of Age has the *Odds* of 560 to 7 (*viz.* 80 to 1) that he does not *die* in a Year; because that of 567 Persons living of 25 Years of Age, no more than 7 die in a Year, leaving 560 of 64 Years old.

2. If it be required to find the Odds, that any Person does not die before he attain to any proposed Age; Then

Take the Number of Persons remaining at the Age proposed, and divide it by the Difference between it and the Number of those of the present given Age; and that shews the Odds there is of the Party's living or dying.

As for Instance; What is the Odds that a Man of 40 may live 7 Years? Take the Number of Persons of 47 Years, which in the Table is 377, and subtract it from the Number of Persons of 40 Years, which is 445, and the Diffe-

377
445
78

377
445
78

rence is 68, viz. $445 - 377 = 68$, which shews that the Persons dying in the 7 Years are 68, and that 'tis 377 to 68, or $5\frac{1}{2}$ to 1, that a Man of 40 does live 7 Years: And so for any other Number of Years.

3. If it be required to find what Number of Years, it is an even Lay, that a Person of any Age proposed shall die, this Table readily performs it: For if the Number of Persons living of the Age proposed be halv'd, it will be found by the Table at what Year the said Number is reduced to half by Mortality; and that is the Age, to which it is an even Wager, that a Person of the Age proposed shall arrive to before he dies.

As for Instance, a Person of 30 Years of Age is proposed; the Number of that Age is 531, the half of it is 265; which Number I find to be between 57 and 58 Years: So that a Man of 30 may reasonably expect to live between 27 and 28 Years.

4. By what has been said, the Price of Insurance upon Lives may in some Measure be regulated, and the Difference discovered between the Price of insuring the Life of a Man of 20 and one of 50 Years of Age.

For Example; it being 100 to 1, that a Man of 20 dies not in a Year, and but 38 to 1, for a Man of 50 Years of Age.

5. Upon these Proportions depend the Valuation of Annuities for Life: For it is plain

that a Purchaser ought to pay only such a reasonable and equal Price for an Annuity, as he hath a probable Chance or Chances of living to enjoy it; which being computed yearly, and the Sum of all those yearly Values being added together, will be the Value of the Annuity for the Life of the Person proposed.

TABLE II. *Mr Simpson's Observations on the Bills of Mortality at London.*

EXPLANATION.

The first and second Columns of this Table shew the several Ages, and the Number of Persons living of each, at *London*, as the former Table does at *Breslaw*. The third Column, mark'd D, shews the Number of Persons which died in each Year, being the Difference in the Number of Persons living in the present Year and the preceding one, which Difference is placed opposite to the Year ; and when such Difference conti-

nues the same for one, two, three, four, &c. successive Years, it constitutes what is called an *Interval* of Years, in which the Chances of Life are said to be equal. Such Intervals are separated by a black Line across from the Left to the Right-hand of the Table.

The fourth Column mark'd I, shews the Difference of each Interval, and when the said Difference commences. When the Number in the 3d Col. of the former Interval exceeds the present or following one, it (the present one) is mark'd thus +, signifying more: And when the former Number in the said 3d Column is less than that of the present, it is mark'd thus —, signifying less.

By Tables of Mortality of this Sort, thus disposed and digested, and from the Help of a Table of Compound Interest, shewing the present Worth of 1 *l.* certain, due at the End of any Number of Years to come, the Value of 1 *l.* Annuity on a single Life is found of any Age proposed, thus:

RULE. From the first Number in the first or Age Column of each Interval, which follows the given Age, subtract the given Age, and the several Remainders are called the Complements of Life, or of each Interval (by this Author and Dr Halley) and observe to mark the said Complements + or —, as they respectively are deduced from the several Intervals, and mark'd in Col. 4. Then take the present Worth of One Pound for a

the several Complements aforesaid, and multiply them into the several Numbers respectively in the 4th Col. from the given Age, (which from 8 Years of Age, being but one, make no Alteration.) Next multiply the Number in the second Column, opposite to the given Age, by the Interest of 1%. and divide the Product by the Rate; then place the Quotient under the Sign $\dagger$, and add all the Numbers under this Sign into one Sum. Also add up all the Numbers under — into one Sum, having placed under them the Number in the 3d Column opposite the given Age, and subtract the whole from the other Sum $\dagger$. Lastly, divide the Remainder by the Quotient aforesaid multiplied into the Interest of 1%. and the new Quotient will be the Answer.

What's the Value of an Annuity of 1%. for an Age of 25, Interest at $4\frac{1}{2}$ per Cent?

The first Numbers in the Age Column in the several Intervals from the given Age are, viz.

N ^o	29	39	43	47	54	61	70	74	76	85	89	95
Age	25 deduct											
Comp.	4	14	18	22	29	36	45	49	51	60	64	70
	—	—	+	+	+	+	+	+	+	+	+	+

Then find the Number to be added to the Complements mark'd $\dagger$, viz.

Number of Persons living at the }
 given Age 25, per Col. 2d } 426
 Interest of 1 l, multiply by ,045

Divide by the Rate 1,045)19,170(18,3445

Next in the following Table against the level
 Complements thus,

+ Years	— Years
18 ,4528	4 ,8385
22 ,3797	14 ,5399
29 ,2790	8,0000 N ^o in Col. 3d
36 ,2050	— opposite Age

1,05950 for
a Divisor.

1,0595) 12,2260 (11,539 the Answer.

The Answers according to different Authors
are, viz. Years Purch.

By Mr *De Moivre* ——— 11,837

Mr *Simpson* ——— 10,433

Dr *Halley* ——— 11,539

From which it appears that Mr Simpson's falls short of both the others, (which are pretty near a-like) viz. rather more than a Year in the one, and almost a Year and a Half in the other. Notwithstanding which, his is probably as just as either of the other for London, the Place it was calculated for, there being a greater Disparity in the Births and Burials in that City than in any other, owing chiefly to its vast extensive Trade, which occasions a great Resort of People from almost all Places in the known World.

From what has been said, every one who has Occasion to make Use of these Tables, 'tis presumed will be able to apply them to his own Purposes, either as a Buyer or Seller of Annuities.

Just Published, by the Author,

Price THREE SHILLINGS and SIX-PENCE,

In a neat Pocket Volume,

(To which is prefixed by Way of Introduction, an Essay on the Nature and Business of Exchanging in general; and in which all the different Coins of Foreign Nations are exactly equated; so that the Value of any Sum of Foreign Money at Par, as mentioned in the News-papers, &c. may be readily computed, in Sterling, thereby)

THE BRITISH NEGOCIATOR :
Or, FOREIGN EXCHANGES made perfectly Easy,
(To all who understand the Rule of Three only)

Containing, TABLES for all the various Courses of Exchange from, and the several Coins equated of, Holland, Hamburgh, Germany, France, Spain, Portugal, Venice, Leghorn, Genoa, Denmark, Poland, Sweden, Russia, and Ireland. Together with Tables and Rules for Exchanges, from Asia, Africa, and America, or the West-Indies: And the Exchanges of the principal Foreign Nations with one another.—The Pars throughout the Whole are estimated with great Accuracy; and the Loss or Gain per Cent. with Respect to England, at all the various Courses of Exchange, above or under Par, pointed out.—Also, Arbitration of Exchanges, in a new and concise Method applicable to Business. Likewise the Weights and Measures of Foreign Nations equated.

To which are annexed,

Several MERCANTILE TABLES, equally useful to Foreign Traders and Factors, and to Inland Merchants and Dealers.

L O N D O N :

Printed for J. RICHARDSON, in Pater-noster-Row; and
T. SLACK.

[illegible]

cat

Thomas, S.

The Banker's Sure Guide: or Monied Man's Assistant In Three Parts, viz.
Containing, I. Tables of Interest ... II. Tables of Discount, ... III.
Sundry Tables, shewing the Value of Annuities certain, and Annuities on
Lives, ... ; To which is prefixed, by Way of Introduction, A New and
Comprehensive Treatise on Decimals, and an Explanation of the several
